

SURAJ ARMUGHAM

Site Reliability / DevOps / Systems Engineer

Dublin, Ireland | +353 83 845 3743 | suraj.armugham@gmail.com | linkedin.com/in/suraj-armugham | [Portfolio](#) | [GitHub](#)

Work Authorisation: Stamp 1G — eligible for full-time work in Ireland

SUMMARY

IT engineer with 5+ years keeping large-scale enterprise environments reliable, secure and continuously deployable. Combines monitoring-driven production support and ITIL-based Incident, Change and Problem Management with hands-on Linux administration and automation using Python, Terraform, Ansible, Docker and Kubernetes. MBA in Project Management adds business alignment to service delivery.

SKILLS

Cloud & Containers: AWS, Azure, PCF, Docker, Kubernetes

CI/CD & IaC: Git, GitHub Actions, Jenkins, GitLab, Terraform (IaC), Ansible (CaC)

Monitoring & Observability: Prometheus, Grafana, Splunk, Zabbix, Nagios, New Relic, Catchpoint, OEM

Systems & Infrastructure: Linux and Windows administration, VMware, SAN/NAS/RAID, patch and vulnerability management

Networking & Security: TCP/IP, DNS, HTTP/HTTPS, load balancing, firewalls, reverse proxy; Active Directory, LDAP, Vault, SSH, TLS/SSL

Programming & Automation: Python (FastAPI, Flask, REST APIs), Bash, Java

Databases & Middleware: SQL, Oracle, PostgreSQL, MySQL; IBM MQ, Apache Kafka, GoldenGate

ITSM & QA: ServiceNow, Jira, ITIL (Incident, Change, Problem Management), RCA; Selenium, Playwright, PyTest, Rest Assured

AI Tools: Claude Code, OpenAI Codex

PROFESSIONAL EXPERIENCE

Software Engineer 2 — IT (Infrastructure Support / DevOps / SRE)

Nov 2021 – Jan 2025

Dell Technologies — Digital Services, Environment Management Team | Bangalore, India

- Implemented monitoring-driven self-healing automation using Python REST APIs, enabling proactive issue resolution, reducing manual intervention and improving incident MTTR.
- Supported CI/CD application deployments — Blue-Green releases, smoke-test validation and rollback coordination — and provisioned infrastructure with Terraform (IaC), enforcing consistent configuration with Ansible.
- Delivered infrastructure operations including firewall/NAS setup, Day-2 operations, EOL/VM migrations and network/IP troubleshooting, alongside vulnerability and patch management to meet security compliance timelines.
- Resolved environment Jira defects through Major Incident Management (MIM) coordination, maintaining platform availability for multiple product teams and meeting defect SLAs during parallel releases.
- Led QA automation for internal tools (Selenium, Playwright, REST API testing); ran daily stand-ups tracking defects, blockers and resource allocation, and managed vendor escalations with Technical Account Managers.

Software Engineer 1 — IT (Associate Consultant, Datamatics)

Feb 2021 – Nov 2021

Dell Technologies — Digital Services, Environment Management Team | Bangalore, India

- Monitored environment health using Splunk, Grafana, Zabbix, Catchpoint and OEM; managed ServiceNow ITSM operations including incident handling and end-to-end change management.
- Provided environment and application support across Oracle DB, Linux/Windows, vSphere, PCF microservices, Oracle SOA/Siebel/GoldenGate, Salesforce, middleware (IBM MQ, Kafka) and SSL certificates.
- Performed IAM and access management via Active Directory and LDAP; authored knowledge bases and LOPs covering reboots, patching, DB/application bounce, deployments, migrations and data-centre maintenance.

Production Workflow Operations Engineer (Ticket Dispatcher)

Nov 2019 – Oct 2020

PowerSchool — Cloud Operations / Hosting Team | Bangalore, India

- Owned the Incident/Service Request/Alert queue in Freshservice, ensuring OLA/SLA compliance and timely PagerDuty acknowledgements; validated and routed escalations via Salesforce CRM, preventing backlog.
- Raised and tracked Microsoft Azure support cases with incident follow-up and RCA; produced daily operational reports and monitored via Nagios and New Relic, supporting Oracle SQL Developer scripts.

Application Support Engineer

Jan 2019 – Sep 2019

Thomson Reuters / Refinitiv — Application Operations Team | Bangalore, India

- Maintained 100% production availability (KPI) by monitoring scheduled vendor-to-client data feeds and server/database health, troubleshooting failed feeds and managing vendor follow-ups for missing FTP files.
- Published updated database files to clients, managed ServiceNow Incident/Problem/Change tickets, executed SQL/Pervasive SQL requests, DB backups and Azure (QAD Cloud) replication troubleshooting.

EDUCATION

MBA, Project Management — Dublin Business School, Ireland

Jan 2025 – Jan 2026

B.E., Information Science — Reva Institute of Technology (VTU), India

2014 – 2018

TRAINING & CERTIFICATIONS

Cloud: AWS Cloud Practitioner; AWS SysOps Administrator – Associate (training, Udemy)

ITSM: ITIL / ServiceNow — Incident, Change and Problem Management (Dell)

Automation: Selenium WebDriver (Java, Python), TestNG, PyTest, Rest Assured, Performance Testing; Python (HPE)

PROJECTS

Incident Diagnostics API — SRE / Platform Engineering | github.com/SurajArmugham/diagnostics-api

- Built a FastAPI (Python) diagnostics service executing remote Linux health checks (disk, memory, services) over SSH via Paramiko, with audit history in PostgreSQL and a layered API/service architecture.
- Automated CI/CD with GitHub Actions (self-hosted runner): PyTest validation, Docker image lifecycle and Kubernetes deployment — horizontal scaling, ConfigMaps, Vault secrets, readiness/liveness probes, PVC/PV persistence, ingress-nginx with TLS.
- Instrumented the service with Prometheus metrics and Grafana dashboards for latency, error-rate and resource monitoring.

Impact of ITIL Adoption on IT Project Success — MBA Research, Dublin Business School: qualitative study identifying Change Enablement and Incident Management as the highest-impact ITIL practices.
