Work Authorisation: Stamp 1G - Full-time work eligible

SUMMARY

Enterprise IT professional with 5+ years of experience across systems support, operations, infrastructure environment management, and quality engineering in large-scale enterprise environments. Strong in ITIL-based Incident, Change, and Problem Management, monitoring-driven troubleshooting, documentation, and cross-functional collaboration with technical and product teams to support CI/CD releases and achieve SLA targets. Hands-on experience with Linux/Windows administration, infrastructure automation, test automation, containerisation and cloud platforms. MBA graduate in Project Management, bringing a business-aligned, stakeholder-focused, and process-driven approach to service delivery and operational improvement.

SKILLS

IT Service Management (ITIL): Incident, Change & Problem Management, ServiceNow, Jira, RCA, Risk Management

Cloud & Containers: AWS, Azure, PCF, Docker, Kubernetes

CI/CD & DevOps: Git, GitHub, GitHub Actions, Docker Hub, GitLab, Jenkins, Ansible (CaC), Terraform (IaC)

Infrastructure & Systems: Linux & Windows Administration, VMware, SAN/NAS/RAID, Data Recovery & Replication, Vulnerability Management, Patch Management

Identity & Access / Security: Active Directory, LDAP, SSH Keys, HashiCorp Vault, Secrets, TLS/SSL Certificates Management

Networking: TCP/IP, HTTP/HTTPS, DNS, Load Balancing, Firewalls, Reverse Proxy, SDN

Databases: SQL, Oracle, MySQL, PostgreSQL

Middleware: IBM MQ, Apache Kafka, GoldenGate Replication

Monitoring & Observability: Splunk, Zabbix, Catchpoint, Nagios, New Relic, Grafana, OEM

Testing & QA: Manual Testing, Selenium WebDriver, Playwright, Rest Assured, TestNG, PyTest, Requests, TestClient

Artificial Intelligence (AI): OpenAI Codex

Programming & Scripting: Python, Bash, Java, FastAPI / Flask (REST APIs)

Project & Professional: IT Project Management, Stakeholder & Vendor Management, Customer Handling & Prioritisation, Leadership & Team Collaboration

PROFESSIONAL EXPERIENCE

Software Engineer 2 - IT (Infrastructure Support / DevOps / SRE) | **Dell Technologies, Bangalore, India** | Nov 2021 - Jan 2025

Dell Digital Services – Environment Management Team

- Resolved environment Jira defects via MIM coordination to maintain infrastructure platform availability across multiple product teams (customers), supporting parallel releases and meeting defect SLAs through improved monitoring.
- Implemented monitoring-driven self-healing automation using Python-based REST APIs, enabling proactive issue resolution, reducing manual intervention, and improving incident MTTR.
- Supported application deployments through CI/CD pipelines, including Blue-Green deployment, smoke test validations, and rollback coordination.
- Supported infrastructure requests including firewall/NAS setup, new infrastructure (Day 2 Operations), EOL/VM migrations, and network/IP troubleshooting aligned to environment architecture.
- Delivered vulnerability and patch management activities supporting security compliance and remediation timelines.
- Provided vendor management support, handling Salesforce escalations with Technical Account Managers (TAMs) while balancing internal and external SLAs.
- Provisioned infrastructure using Terraform (IaC) through CI/CD pipelines and configured systems with Ansible, keeping resource utilisation and configuration consistent across environments.
- Led QA for internal tools; executed REST API tests and UI automation using Selenium and Playwright, tracking defects in Jira.
- Ran daily stand-ups to track defects, blockers, and resource allocation, maintaining high environment uptime.

Software Engineer 1 - IT (Associate Consultant – Datamatics) | **Dell Technologies, Bangalore, India** | Feb 2021 - Nov 2021

Dell Digital Services – Environment Management Team

- Monitored environment health using Splunk, Grafana, Zabbix, Catchpoint, OEM, and internal DB/ER monitors.
- Managed ServiceNow ITSM operations including incident handling and end-to-end change management.
- Provided environment and application support across Oracle DB, Linux/Windows, vSphere web-client, PCF microservices, Oracle SOA Suite (SOAP Services)/Siebel/GoldenGate, Salesforce Lightning, SSL certificate management, and middleware (IBM MQ, Kafka).
- Performed IAM and access management using Active Directory (AD) and LDAP authentication.

- Maintained knowledge bases and authored LOPs covering reboots, patching, DB/application bounce, Java updates, deployments, migrations, password resets, and data-centre maintenance.

Ticket Dispatcher (Production Workflow Operations Engineer) | **PowerSchool, Bangalore, India** | Nov 2019 - Oct 2020
Cloud Operations / Hosting Team

- Monitored the ticket queue and assigned Incidents/Service Requests/Alerts via Freshservice, ensuring OLA/SLA compliance and PagerDuty acknowledgements.
- Used Salesforce CRM to validate details and support accurate escalation and routing; prevented backlog by coordinating with engineers through resolution.
- Raised and tracked Microsoft Azure Support cases and supported incident follow-up/RCA; maintained Jira, Change and Problem tickets with high data quality.
- Produced daily operational reports/trackers; monitored via Nagios and New Relic; supported SIS tasks and Oracle SQL Developer scripts.

Application Support Engineer | **Thomson Reuters / Refinitiv, Bangalore, India** | Jan 2019 - Sep 2019
Investment Management Data Analytics – Application Operations Team

- Monitored scheduled vendor-to-client data feeds and ensured server/database health through routine checks and operational validation.
- Troubleshoot failed feeds using in-house tools; escalated delays and managed vendor follow-ups for missing FTP files, maintaining 100% production availability (KPI).
- Published updated database files (.upd) to clients, handled customer queries, and managed ServiceNow tickets (Incident/Problem/Change).
- Executed SQL / Pervasive SQL requests, provided production DB backups, raised incidents for FTP outages, and supported QAD Cloud (Azure) replication troubleshooting via SQL Server Management Studio.

EDUCATION

MBA, Project Management – Dublin Business School, Ireland | Jan 2025 - Jan 2026
B.E., Information Science – VTU (Reva Institute of Technology), India | Sep 2014 - Sep 2018

TRAINING & CERTIFICATIONS

- **ITIL / ITSM (ServiceNow):** Dell ServiceNow – Requester, Incident, Change & Problem Management
- **Cloud:** AWS Cloud Practitioner, AWS SysOps Administrator – Associate (Udemy)
- **Test Automation:** Selenium WebDriver (Java + TestNG / Python + PyTest), Selenium Grid & Cloud (Sauce Labs + Jenkins), Selenium IDE; Rest Assured API Automation; Performance Testing Foundations (Udemy)
- **Programming:** Python Programming (HPE Certification) – Glisten Education, Bangalore
- **Product & Business:** Product Management Fundamentals (Udemy)

PROJECTS

1. Incident Diagnostics API - SRE / Platform Engineering Portfolio Project | github.com/SurajArmugham/diagnostics-api

- Built a FastAPI (Python) REST diagnostics service that executes remote Linux health checks (disk, memory, service) over SSH using Paramiko, auditing history to a PostgreSQL database and implementing a layered architecture with separated API routes and service business logic.
- Built GitHub Actions CI/CD pipelines on a self-hosted runner, automating PyTest validation, Docker image lifecycle management, and deployments to containerised Docker Compose and Kubernetes using kubectl and kubeconfig.
- Deployed workloads to a Kubernetes cluster using Deployments/ReplicaSets with horizontal scaling, ClusterIP Services with DNS service discovery, ConfigMaps, Infisical Vault-based secrets management and authentication, readiness & liveness probes, CPU and memory requests & limits, and PVC/PV for data persistence.
- Exposed services through an ingress-nginx reverse proxy with host- and path-based routing and load balancing, terminating TLS/HTTPS using OpenSSL certificates stored as Kubernetes TLS Secrets.

2. Exploring the Impact of ITIL Adoption on IT Project Success - MBA Research, Dublin Business School

- Qualitative study of how ITIL adoption affects IT project success across time, cost, scope, and quality, based on six semi-structured interviews with IT professionals, analysed using Braun & Clarke thematic analysis.
- Found ITIL practices support clearer scope definition, more predictable timelines, reduced rework cost, and stronger delivery quality.
- Identified Change Enablement and Incident Management as the most consistently impactful practices for stabilising service delivery and controlling project risk.
