SUMMARY

IT engineer with 5+ years in enterprise systems support, operations and platform management. Strong in ITIL Incident, Change and Problem Management with monitoring-driven troubleshooting, supporting CI/CD releases and meeting SLA targets. Hands-on with Linux/Windows, cloud, containers and infrastructure/test automation. MBA in Project Management adds business alignment to service delivery.

SKILLS

Cloud & Containers: AWS, Azure, PCF, Docker, Kubernetes

CI/CD & IaC: Git, GitHub Actions, Jenkins, GitLab, Terraform (IaC), Ansible (CaC), Vault

Monitoring & Observability: Prometheus, Grafana, Splunk, Zabbix, Nagios, New Relic, Catchpoint, OEM

Systems & Infrastructure: Linux and Windows administration, SSH, VMware, SAN/NAS/RAID, patch and vulnerability management

Networking & Security: TCP/IP, DNS, HTTP/HTTPS, load balancing, firewalls, reverse proxy; Active Directory, LDAP, TLS/SSL, OAuth2 (JWT)

Programming & Automation: Python (FastAPI, Flask, REST APIs), Bash, Java; Selenium, Playwright, PyTest, Rest Assured

Databases & Middleware: SQL, Oracle, PostgreSQL, MySQL; IBM MQ, Apache Kafka, GoldenGate

Business & Delivery: Stakeholder and vendor management, escalation handling, process documentation, qualitative research

ITSM: ServiceNow, Jira, ITIL (Incident, Change, Problem Management), RCA

AI Tools: Claude Code, OpenAI Codex

PROFESSIONAL EXPERIENCE

Software Engineer 2 — IT (Infrastructure Support / DevOps / SRE) Nov 2021 – Jan 2025

Dell Technologies — Digital Services, Environment Management Team | Bangalore, India

- Implemented monitoring-driven self-healing automation using Python REST APIs, enabling proactive issue resolution, reducing manual intervention and improving incident MTTR.
- Supported CI/CD application deployments — Blue-Green releases, smoke-test validation and rollback coordination — and provisioned infrastructure with Terraform (IaC), enforcing consistent configuration with Ansible.
- Delivered infrastructure operations including firewall/NAS setup, Day-2 operations, EOL/VM migrations and network/IP troubleshooting, alongside vulnerability and patch management to meet security compliance timelines.
- Coordinated with product stakeholders through Major Incident Management (MIM) to resolve environment defects, maintaining platform availability and meeting defect SLAs during parallel releases.
- Led QA automation for internal tools (Selenium, Playwright, REST API testing); ran daily stand-ups tracking defects, blockers and resource allocation, and managed vendor escalations with Technical Account Managers.

Software Engineer 1 — IT (Associate Consultant, Datamatics) Feb 2021 – Nov 2021

Dell Technologies — Digital Services, Environment Management Team | Bangalore, India

- Monitored environment health using Splunk, Grafana, Zabbix, Catchpoint and OEM; managed ServiceNow ITSM operations including incident handling and end-to-end change management.
- Provided environment and application support across Oracle DB, Linux/Windows, vSphere, PCF microservices, Oracle SOA/Siebel/GoldenGate, Salesforce, middleware (IBM MQ, Kafka) and SSL certificates.
- Performed IAM and access management via Active Directory and LDAP; authored knowledge bases and LOPs used in on-call and out-of-hours support, covering reboots, patching, DB/application bounce, deployments, migrations and data-centre maintenance.

Production Workflow Operations Engineer (Ticket Dispatcher) Nov 2019 – Oct 2020

PowerSchool — Cloud Operations / Hosting Team | Bangalore, India

- Owned the Incident/Service Request/Alert queue in Freshservice, ensuring OLA/SLA compliance and timely PagerDuty acknowledgements; validated and routed escalations via Salesforce CRM, preventing backlog.
- Raised and tracked Microsoft Azure support cases with incident follow-up and RCA; produced daily operational reports and monitored via Nagios and New Relic, supporting Oracle SQL Developer scripts.

Application Support Engineer Jan 2019 – Sep 2019

Thomson Reuters / Refinitiv — Application Operations Team | Bangalore, India

- Maintained 100% production availability (KPI) by monitoring scheduled vendor-to-client data feeds and server/database health, troubleshooting failed feeds and managing vendor follow-ups for missing FTP files.
- Published updated database files to clients, managed ServiceNow Incident/Problem/Change tickets, executed SQL/Pervasive SQL requests, DB backups and Azure (QAD Cloud) replication troubleshooting.

ADDITIONAL EXPERIENCE

Barista (Part-Time) — Insomnia Coffee Company, Dublin, Ireland March 2025 – Present

- Delivered high-volume customer service, applying communication, prioritisation and customer-handling skills relevant to IT support.

EDUCATION

MBA, Project Management — Dublin Business School, Ireland Jan 2025 – Jan 2026

B.E., Information Science — Reva Institute of Technology (VTU), India 2014 – 2018

TRAINING & CERTIFICATIONS

Cloud: AWS Cloud Practitioner, AWS SysOps Administrator – Associate (Udemy)

ITSM: ITIL / ServiceNow — Incident, Change and Problem Management (Dell)

Automation: Python (HPE); Selenium WebDriver (Java, Python), TestNG, PyTest, Rest Assured, Performance Testing (Udemy)

PROJECTS

Incident Diagnostics API — SRE / Platform Engineering | github.com/SurajArmugham/diagnostics-api

- Built a Python (FastAPI) REST service that runs remote Linux health checks (disk, memory, services) over SSH and audits results to PostgreSQL, containerised with Docker and deployed on Kubernetes with Vault secrets, liveness probes and persistent volumes.
- Automated end-to-end delivery with GitHub Actions CI/CD (PyTest validation, Docker image build, Kubernetes rollout), exposed the service via ingress-nginx with TLS termination, and instrumented it with Prometheus metrics and Grafana dashboards.

Impact of ITIL Adoption on IT Project Success — MBA Research: Interviewed six IT professionals; found Change and Incident Management the most impactful practices.
